LIXEN

BRAND

The Good-Natured Laxative

The LIXEN preparations of senna have the following advantages:

1 **Safety**—whereas some aperient preparations have been found to produce harmful effects.
2 **Efficiency**—whereas many aperients produce after-constipation, resulting in the need for larger doses, and eventually a purgative habit.
3 Preparation from senna pods, which are considered more effective than the leaves.
4 Preparation by a special cold process to obviate griping.
5 Pleasant flavouring.
6 Suitable for adults, children, invalids, and the aged.

PUBLIC HEALTH VACANCIES

Note of the advertisements below relate to a woman between 18 and 40, inclusive, unless such woman (a) has living with her a child of hers under the age of 14, or (b) is registered under the Blind Persons Acts, or (c) has a Ministry of Labour permit to allow her to obtain employment by individual effort.

HUNTINGDONSHIRE COUNTY COUNCIL
ORTHOPAEDIC NURSE

Applications are invited for the post of Nurse in connection with the County Council's Orthopaedic scheme. The salary will be between £240 and £270 per annum according to age and experience, with travelling expenses on the county scale for use of own car.

Applicants must possess the certificate of the Chartered Society of Massage and Medical Gymnastics.

The post is designated under the local Government and other Offices Superannuation Act and the Officer appointed will be required to pass a medical examination.

The appointment will be subject to one month's notice on either side.

Applications should be sent to me by Monday, November 9th, 1943.

County Health Offices, N. H. HARRISON,
Huntingdon. County Medical Officer.
(528)

ESSEX COUNTY COUNCIL
Temporary Health Visitor required by Essex County Council for the Maldon Area. Salary £5 5s. a week, travelling allowance and war bonus. Forms of application obtainable from Clerk of the County Council, County Hall, Chelmsford. Last date for receipt of applications, 16th November, 1943. (710)

HEALTH VISITOR AND SCHOOL NURSE

Applications are invited for the post of **Health Visitor and School Nurse.** Candidates must hold the Health Visitors' Certificate of the Royal Sanitary Institute and must be under 35 years of age. The successful candidate will be required to contribute to the Superannuation Scheme.

The officer appointed will be required to devote the whole of her time to duties in connection with Tuberculosis, School Medical Services, Infant Life Protection, and Maternity and Child Welfare.

The salary will be from £200—£230 per annum, according to experience, plus war bonus of 10 per cent, and a car allowance according to the county scale, The candidate must be able to drive a car, and possession of a car will be an advantage.

The appointment is subject to one month's notice on either side.

Forms of application can be obtained on request from the County Medical Officer, Gazeley House, Huntingdon, and should be returned not later than November 9th, 1943. (560)

CITY OF LEICESTER
HEALTH DEPARTMENT
MUNICIPAL MIDWIFERY SERVICE

Applications are invited for the post of **Municipal Midwife.** Salary according to the Midwives Salaries Committee (Rushcliffe) Report. Preference will be given to Midwives who are State-registered Nurses.

The post is designated under the Local Government Superannuation Act, 1937.

The successful candidate will be required to live in the district to which she is allotted, and it is essential that she should ride a cycle.

Forms of application may be obtained from the undersigned, and applications with testimonials should be returned to:—

WILFRID CARR, Secretary.
City Health Department,
Grey Friars, Leicester.
October, 1943. (611)

BOROUGH OF TODMORDEN

Applications are invited for the position of **Health Visitor and School Nurse.** Candidates must be general trained nurses holding the C.M.B. and Health Visitor's Certificates. Salary from £200 to £230 per annum, according to experience, plus appropriate war bonus and uniform, etc. allowance of £10 per annum. The appointment is subject to the Superannuation Act, and to medical examination.

Forms of application obtainable from the Medical Officer of Health, Ridgefoot, Todmorden, to reach me (endorsed "Nurse") with copies of not more than two recent testimonials, not later than 15th November, 1943.

Municipal Offices, HERBT. GARRATT,
Todmorden. Town Clerk.
(445)

ENFIELD EDUCATION COMMITTEE

Applications are invited for the appointment of a **School Nurse.** Qualifications: State-registered Nurse. Single. Preference will be given to applicants holding the Health Visitors' Certificate and the Certificate of the Central Midwives' Board. The Nurse may be required to engage later in Maternity and Child Welfare Work as well as School Medical work. Salary: commencing £215, rising by £10 yearly, to £255 per annum (subject to deductions for superannuation and insurance), with annual allowance of £5 for travelling and £5 for uniform. Bonus now £36 8s. p.a. Medical examination required.

Applications: To state in candidate's own handwriting, age, training, qualifications and experience, any relationship to Members or Officers of the Council or Education Committee, and to be sent with copies of 3 testimonials to the School Medical Officer, Public Offices, Enfield, Middlesex, not later than Monday, 22nd November, 1943. (686)

COUNTY BOROUGH OF DUDLEY
MUNICIPAL MIDWIFE

Applications are invited from State-registered Nurses who are also State Certified Midwives for the post of Municipal **Midwife.** The commencing salary will be

(continued in next column)

£270 per annum, rising by annual increments of £10 to a maximum of £360 per annum, plus war bonus, together with £20 travelling allowance and free uniform and laundry. The appointment will be terminable by one month's notice on either side and will be subject to the provisions of the Local Government Superannuation Act, 1937.

Applications, accompanied by not more than three testimonials should be forwarded to the undersigned not later than Wednesday, 17th November, 1943.

The Council House, GEO. G. V. CANT,
Dudley. Town Clerk.
30th October, 1943. (659)

The advertisements for women published under this heading are permitted by the Ministry of Labour and National Service under the Employment of Women (Control of Engagement) Order, 1943.

CITY OF NORWICH
HEALTH VISITOR AND SCHOOL NURSE

Applications are invited from State-registered Nurses for the post of temporary **Health Visitor and School Nurse.** Salary £230 per annum, rising to £265 per annum (plus war bonus).

For full particulars apply to the Medical Officer of Health, 68 St. Giles Street, Norwich, by whom applications for the post must be received not later than the 15th November, 1943. (557)

NORTHAMPTONSHIRE COUNTY COUNCIL
HEALTH VISITOR

The Northamptonshire County Council invite applications for the post of **Health Visitor** (there are two vacancies). The commencing salary is £200 per annum, rising by £10 to a maximum of £250 (with a temporary war bonus at present at the rate of £26 per annum), uniform allowance at the rate of £10 per annum, and travelling expenses according to the scale from time to time approved by the County Council. The appointments will be terminable by one month's notice on either side.

Applicants must be State-registered Nurses holding the Health Visitor's Certificate of the Royal Sanitary Institute or the diploma issued by the Board of Education (Health Visitor's Training) Regulations, 6919.

The successful candidate will be required to undergo a medical examination, and the salary will be subject to a deduction under the Local Government Superannuation Act, 1937.

One of the health visitors will be required to provide her own motor car.

Application forms, with particulars of duties, may be obtained from the undersigned, and must be returned, together with copies of three recent testimonials, not later than 20th November, 1943.

C. M. SMITH,
County Medical Officer of Health.
Health Department, County Offices,
Guildhall Road, Northampton.
1st November, 1943. (699)

ESSEX COUNTY COUNCIL
APPOINTMENT OF FIRST ASSISTANT TO CHIEF HEALTH NURSE

The County Council invite applications for the above appointment.

Candidates must be General Trained Nurses, State Certified Midwives, and possess the Health Visitor's Certificate. Preference will be given to candidates with experience as a Health Visitor and as a non-medical supervisor of midwives.

The salary, subject to any adjustment which may subsequently be necessary to conform with any recommendation which may be made by the Rushcliffe Committee, and adopted by or on behalf of the Council, will be at the rate of £325 a year and will rise, subject to satisfactory service, by annual increments of £12 10s. to £400 a year; the usual allowances and a war bonus will be paid. Commencing salary will be according to experience and qualifications.

Applications on the prescribed form (obtainable from the undersigned), accompanied by copies of not more than three recent testimonials, which will not be returned, should be addressed to me and delivered not later than 23rd November, 1943.

This advertisement is issued by permission of the Ministry of Labour and National Service under the Employment of Women (Control of Engagement) Orders, 1943.

JOHN E LIGHTBURN,
Clerk of the County Council.
County Hall, Chelmsford.
29th October, 1943. (711)

REDRUTH, CORNWALL

Immediate vacancy for **Housekeeping Pupil.** For full particulars and application forms apply to Matron. (439)

SUSSEX EYE HOSPITAL
EASTERN ROAD, BRIGHTON

Staff Nurse required, State-registered. 1 year's ophthalmic training. Lectures and certificates given. Rushcliffe scale of salary. Federated Superannuation Scheme in operation. Apply to the Matron at the Hospital. (467)

BRISTOL ROYAL HOSPITAL FOR SICK CHILDREN AND WOMEN
ST. MICHAEL'S HILL

Staff Nurse required, S.R.N., R.S.C.N., to assist with Nurses Home duties. Salary according to Rushcliffe scale.

Applications to the Matron, with Matron's name for reference. (515)

The advertisements for women published under this heading are permitted by the Ministry of Labour and National Service under the Employment of Women (Control of Engagement) Order, 1943.

VICTORIA HOSPITAL, BURNLEY

Temporary Radiographer required. Salary according to the Ridiographers' Society Scale. Apply, giving full particulars, to the Matron.

This advertisement is inserted by permission of the Ministry of Labour and National Service under the Employment of Women orders, 1943. (650)

HARROGATE & DISTRICT GENERAL HOSPITAL
KNARESBOROUGH ROAD, HARROGATE

Pupil-Housekeeper required. Four months course. Certificate given. Candidates must be S.R.N. and have had Ward Sister's experience. Salary at the rate of £36 p.a.

Apply to Matron. (653)

No egg shortage

—a dozen a month for everybody!

SOME TIPS ON MAKING DELICIOUS EGG DISHES

"Take a dozen eggs," said Mrs. Beeton. Well, the present allowance of dried eggs means a dozen eggs a *week* for the average family, which is more than most people used before the war!

Remember that dried eggs are new-laid shell eggs with only the shell and the water taken away.

Make an omelette by allowing 3 or 4 eggs for two people.

"Reconstitute" the eggs, add seasoning, beat well, and cook in smoking hot fat until all the egg is set. Cook it *quickly*, and don't overcook.

When making cakes and puddings, add the eggs *dry* to the other ingredients and add the water afterwards. Eggs are a grand nourishing food for children and dried eggs have the full nutritional value of shell eggs.

Don't mix dried eggs with water till you are ready to use them.

You are allowed one packet of Dried Eggs per ration book every four weeks.

Issued by the Ministry of Food, London, W.1

PILES

Soothing, comforting, healing—Cuticura Ointment gives marvellous relief by allaying the distressing pain, irritation and inflammation. Perseverance often curative.

Cuticura OINTMENT

"A Nurse Must Know the Answer"

Any woman who suffers terrible periodic pains could never stand the trying work of the nurse. Duty comes first and she *must* carry on. She must look fit and be bright no matter what her physical condition may be. Yet nurses are human and subject to the same pains as other women. But they know how to avoid those depressing pains and racking headaches. By experience they have found in A-K Tablets a quick and unfailing means of relief and one that does not disturb the natural action of the female system. A-K will save you from periodic suffering. Get some to-day!

NOTE.—A-K is how thousands of women ask for Anti-Kamnia brand Analgesic Tablets. If you say A-K your chemist will know. 1s. 5d. a box Including Tax).

Endorsed by the Medical Profession

Angier's has been prescribed by the medical profession and used in the hospitals for over fifty years. The most perfect and most palatable of all Emulsions, Angier's agrees with delicate, sensitive stomachs, even when prepared foods are rejected. Soothing to the entire mucous tract, a great aid to digestion and an invaluable tonic and restorative, it is a recognised treatment for certain bronchial affections, digestive and bowel disorders.

It is equally useful for adults and children.

A Doctor writes: "I have used Angier's for many years with most gratifying results. I always prescribe it to my patients in bronchitis and catarrhal conditions and for the respiratory tract. Having myself suffered a good deal from broncho-pneumonia and bronchial catarrh, I have found it most useful personally, and I frequently commence the winter by taking it, as I find it an excellent tonic and preventative of bronchitis. Will you kindly send me a large bottle for my personal use and forward your account to me." (Signed) — M.B., Ch.B.

EDITOR: MISS K. F. ARMSTRONG, S.R.N., S.C.M., DIPLOMA IN NURSING, LONDON UNIVERSITY

Representing Ward Sisters

ON every side there are indications that members of the nursing profession feel that ward sisters could make a valuable contribution to the development of the nursing profession and that, with this in view, it would be helpful if ward sisters had direct representation on such bodies as the General Nursing Council, the Council of the Royal College of Nursing, the Rushcliffe Committee, and similar bodies. It is not the first time that the idea has had consideration. In fact, at one period, seats on the General Nursing Council were allocated for direct representation of specific interests and one place was reserved for a ward sister and held by a ward sister for the usual five year period. At the next election, however, all seats were open to all nurses and we do not remember whether any ward sister contested the election, but we do know that no ward sister secured election.

✦ ✦ ✦

If the position is to be rectified two preliminary steps need to be taken. In the first place, the nursing profession must prepare the employing authorities to make it possible for suitable candidates to hold seats on such councils and committees. It is useless for anyone to hold a seat on such a body unless she can attend regularly, and can also take part in the committee work which the members must undertake. Here, of course, the ward sister of to-day is at a disadvantage.

Obviously a ward sister cannot run her ward satisfactorily unless she is present when the surgeon or physician in charge of her patients does his round. Even though a committee only meets once in the month, it must be difficult for the ward sister to be absent at such a time, although the matron might be able to arrange satisfactorily for her relief. Further, the position is complicated by the fact that, in the ward of to-day, as a general rule, it is not a case of having one medical man visiting on one day a week, or even two. It is no uncommon thing to find that the beds in any one ward are divided among three or four members of the medical staff, each with his different visiting day and, in the surgical ward, his different operating day. This development has greatly complicated ward management from every angle, and certainly complicates this question of taking up the responsibility of representation of nursing interests.

Further, even when the ward sister has no obstacle to prevent her being absent from her ward at the necessary time, she needs to have permission for absence from her employing authorities. Even in the case of the matron, some employers do not readily consent to this and seem to fail to appreciate the gain which such contacts yield to the individual and, therefore, to the institution in which she works. For whereas every member on such a committee makes her individual contribution, she also gains a breadth of view and general knowledge of nursing and hospital matters which cannot but benefit the institution she serves.

✦ ✦ ✦

But there is, as we have already said, a second point. Not only must we all work to prepare for the ward sister to have the opportunity to sit on such committees ; the ward sister must prepare herself. The ward sister however good she may be in herself and however capable of managing a ward, needs to be able to speak not only from her experience as a ward sister in one, two or three different hospitals. She may have been a ward sister over a period of many years, but she will not make the best contribution of which she is capable unless she has already some knowledge, if possible, of committee work and also of the difficulties and excellencies of ward sisters in other hospitals.

✦ ✦ ✦

It is for this reason we are so glad that the Ward and Departmental Sisters' Groups within the branches of the Royal College of Nursing are spreading so quickly and meeting with such encouraging response. For such groups by their various discussions, conferences and other contacts help to break down the 'insularity' of the ward sisters in the different hospitals, enable them to form a common policy, help them to build up reliable statistics of what are existing standards, and give them material on which ideals for future reconstruction can and should be built up. A ward sister who has become a leader of such a group and made contact with other groups, through the central organization of the Royal College of Nursing, will be fittingly prepared for the responsibilities of representing ward sisters as a whole, and able to make a very valuable contribution to nursing of the future when the opportunity arises : and we feel sure it will arise.

A Professional Duty

NOVEMBER 1 has come and gone. It is the beginning of the new financial year and College subscriptions are due. Failure to send in subscriptions means waste of paper and time in sending second reminders. What the Royal College of Nursing can do for you depends on what you do for it. Give it your whole-hearted and immediate support and encourage your friends to do the same.

Priority for Children

THE main theme of the annual general meeting of the National Baby Welfare Council was the current problem of infants' and children's clothes, with which nurses and midwives are only too familiar. Sir Thomas Barlow, K.B.E., director general of civilian clothing to the Board of Trade, who led the discussion, pointed out, however, that the headache is not only on the mother's side. The scarcity of children's clothes is a perpetual worry to the Board of Trade, which was doing all it could to ensure better supplies, better distribution and 'ceiling' prices. A third of all available wool was now being set aside for children's wear, so that knitted wear should soon be more plentiful ; already the stock of underwear had increased and more factories were being switched from adults' to children's wear. Supplies of baby wool were now so good that most retailers were able to supply a colour range, and bodices were being made so fast that there should soon be a surplus to draw on. More wool was being allocated for pram rugs, shawls, and blankets, but in the purchase of the latter, mothers had not always been too reasonable ; often they demanded white and would not take the darker colours. Extra quantities of rubber composition had been allocated for children's shoes, also conveyor belting, which even if it was not attractive to wear, was most durable. Children would not be asked to wear wooden shoes.

Suggestions Welcomed

IN the ensuing discussion a number of needs for reform became evident. Two speakers urged the need for the provision of surgical boots and some means of getting shoes built up for children with minor defects of the feet or ankles. Another the need for getting shoe repairs done : so many mothers bought their children only one pair of shoes, and let them wear these too long, so that they got past repair, for it took a month or six weeks to get the shoes repaired. Another request was for maternity layettes at reasonable prices, coupon free, as the 60 coupons allotted did not nearly cover requirements. The price of napkins, too, came up more than once, and one speaker urged that the health visitor should have a say in the coupon distribution for children, for she knew the needs of the home. Answering the various questions, Sir Thomas said that the Board of Trade was always interested in constructive criticisms and that the National Baby Welfare Council had agreed to collect all those which had a definite case and to forward them to him. He would particularly like to receive details of the lack of surgical adjustments to shoes for minor defects. The Council had worked out with the Board of Trade a practical layette, and he hoped that, in future, layettes would be easier to secure. Presenting the Council's report for the year, Dr. Geffen, M.D., D.P.H., said that the health of the children of this country was better than ever, due, he felt, not only to the work of the Ministries of Health and Food, but to the fact that more money was coming into the poorer homes than ever before. The sales of the Council's leaflets ran into many thousands, and he thought that their educative work had also helped. Chairman of the meeting was Lord Forrester.

Sop to Cerberus?

UNDER the title of 'My Job,' three nurses took the air on Tuesday last at 9.20 a.m. The first, a children's nurse, would, we feel, from the literary aspect, have much in common with 'the little nurse'. 'Johnny, a nine months' old baby, wrapped in a grubby shawl' came to the hospital. Sister comforts the sobbing mother. 'Wise men came. . . but. . . but there was no but in my heart'. And so on until, cured of malnutrition, Johnny leaves the hospital. The second broadcaster introduced sound common sense into the welter of sentiment which threatens to submerge nursing in the public mind. She took up nursing in a sanatorium because she wanted to do something as dangerous as her brother in the Royal Air Force and, although she found no danger, she found mental satisfaction : the work in the theatre, where 'Sister gave one a sense of well-being' ; the thanks of the patients who grew to be friends. The third

nurse returned to the semi-glamorous world of nobility. 'We first met Harry in August, 1940'. Harry was an Air Force pilot, badly smashed, who after weeks in hospital once more flies his plane. It would, however, hardly seem to be a compliment to the nursing staff that it took another member of the Air Force to rouse Harry to any interest in his recovery. Like Cinderella we should, perhaps, be grateful for small mercies, but we would ask the British Broadcasting Corporation how many people have the time to tune in at such an hour. In America the broadcasts on nursing were relayed at intervals throughout the day, so that everyone should have the chance to listen. Is not English nursing worthy of a similar place in the national effort?

Art at St. Bartholomew's Hospital

In the Grand Hall of St. Bartholomew's Hospital, E.C.1, under the beaming portraits of Henry VIII and Edward VII, and surrounded by portraits of the hospital's great men hang 150 paintings, etchings and models by nurses, doctors, medical students and a porter—an exhibition open until November 7. They do considerable credit to their creators and especially to the medical student organizers of such a representative exhibition. Many of exhibits are by the nursing staff, two have studied at the Slade, one of whom, Miss D. Orpen, the daughter of Sir William Orpen and a nursing auxiliary, is the artist to the hospital's plastic unit. She has a vivid picture of the plastic theatre at work. We would specially congratulate Miss M. Seymour, a V.A.D. helper, on *The Young Doctor*, a sketch of considerable vigour and spontaneity. Miss C. Atkins' miniature, *A Character Study*, shows great insight and skill but we feel that her painting *The Blue Frock* hardly does herself or Sister Smithfield justice. Many of the pictures and posters by the medical staff and students show great understanding of both art and nature and as in previous exhibitions the work of Dr. Geoffrey Bourne, Dr. C. M. Hinds Howell and Sir Harold Gillies grace the room. Such an exhibition at such a time is significant; it shows the vitality in this hospital to-day, and is clear proof that healing the sick envigorates rather than cramps the spirit.

Mental Health

Mr. Ernest Brown, Minister of Health, congratulated the Provisional National Council for Mental Health on its own birth at a recent one-day conference. The Council represents a co-ordination of the voluntary mental health services in the country and Mr. Brown spoke of the invaluable pioneer work of the voluntary workers. 'There is no doubt,' he said, 'that there are duties which can be better performed by *visitors* who come as friends rather than *officials* who come as friends'. Sir Otto Niemeyer, G.B.E., K.C.B., chairman, spoke of the work the Council undertook; apart from advice to many thousands of individuals a year it gave training and lecture services to all kinds of groups of people including the staff of nursery schools. Just as the country was aware of the need of sound physical health, so the Council sought to make it aware of the need of sound mental health; the change from war to peace would demand adjustments which would lead to great emotional strain. Only by being aware of this danger could we act wisely.

THIS WEEK

DATES TO REMEMBER

November 1: the beginning of the financial year. Your subscription is now due.
November 5; Industrial Nurses week-end begins.
November 6: London Branch Study Day at Central Middlesex Hospital
November 13: Conference on Tuberculosis and Venereal Disease with American Public Health Nurses.

(See page 839 for details.)

No Certification

Dr. T. Beaton, O.B.E., M.D., spoke of the splendid nervous and mental health service which now obtained in Portsmouth. Such patients had far more liberty in their own hospitals than in a general hospital: their oddities passed unnoticed, and had no unfortunate results. The word 'insanity', he thought, was a purely legal term and patients to whom it was applied could and did recover. This thought was in line with Mr. J. Duncan, headmaster of Lankhill Special School, and his supporter, Dr. Fenton of Eastbourne, who said the abolition of certification of children was probable. Its use was solely to enable a child to obtain the kind of education he needed. Children previously certified were often just as capable of dealing with ordinary problems as others. When all schools adopted realistic methods of teaching, which encouraged critical thought, all except the uneducable would benefit, and the child who came a delinquent because he was bored to tears by the old fashioned teaching methods of being talked at would vanish. Dr. Skottowe mentioned that although there has been an increase of the less serious mental disorders in Buckinghamshire, from 1.7 per 10,000 in 1938 to 2.4 in 1941, the admissions to county mental hospitals have decreased from 7.7 per 10,000 in 1938 to 6.1 in 1941 amongst the stationary population.

Income and Expenditure

The annual statistical summary made by King Edward's Hospital Fund for London of 169 London hospitals states that on December 31, 1942, there was a total bed complement of 23,048 compared with 22,640 on the same day in 1941. It also states that the total ordinary income of these hospitals is greater than their total ordinary expenditure, £4,741,952 compared with £4,559,899. In some hospitals, of course, there is a large deficit whilst others have a large balance. The condition is, however, healthy. It is interesting to note that the amount spent on 'provisions' and 'surgery and dispensary' varies considerably even amongst the teaching hospitals, and not entirely in relation to the number of patients. The total amount spent on salaries has risen from £1,643,759 in 1941 to £1,918,745 in 1942—an increase of £274,986 or 16.7 per cent. Perhaps this has been partly caused by the recommendations of the Rushcliffe Committee.

The Air Ambulance

No contributions for the Air Ambulance Fund have reached the headquarters of the Student Nurses Association this week. Perhaps some units have sent cheques with their representatives to Leicester to be presented personally to their Secretary.

Nurses are amongst the first to welcome and to help the repatriated prisoners of war. Right: the stretchers arrive. Left: members of Queen Alexandra's Imperial Military Nursing Service take care of some of the blinded

TREATMENT OF SEVERE WAR-TIME BURNS

By H. B. WOODS, S.R.N., Sister, Princess Mary's Royal Air Force Nursing Service

Left: the hand should be firmly bandaged in good position to a light metal splint to prevent deformity and elevated to lessen swelling

EXPERIENCE of war burns has proved that a high standard of nursing treatment is required. This care and attention is amply rewarded by a reduction in mortality and lessening of the severe disablement and disfigurement which follows such severe injuries.

Although these cases are best treated in special 'burns' centres, good results can be achieved by an understanding of the nature of the burn and a few principles of treatment.

Definition of a Burn

For practical purposes a burn may be considered as that destruction of living tissue which is brought about by the action of excessive heat or chemical irritants. For example :—

(1) *Dry heat*—(*a*) in the form of flame ; (*b*) by contact with hot metal.

(2) *Moist heat* (*a*) by steam in contact with the skin ; (*b*) by hot liquids.

(3) *Chemical irritants* in the form of: (*a*) acids ; (*b*) alkalies; (*c*) war gases, *e.g.*, mustard gas.

Two Degrees

Only two degrees of burning are important :—

(1) **Superficial**, where the destruction is limited to the skin surface layers only and results in the formation of typical blisters.

(2) **Deep**, where the destruction of the skin is complete.

MINOR BURNS

Above: *minor burns on the forearm showing blisters left intact*

Right : *minor burns of the left hand with blisters, taken before removal of the wedding ring.*

MAJOR BURNS

Above : *a major burn three days after the accident showing the destruction of tissue*

Left : *major burn of the right leg showing exposed tendons and shaft of the tibia*

It is characterized by the separation of the surface skin layer leaving the deeper layers white or charred.

Assessment of Severity

In assessing the severity of :—(1) *Minor burns*; only the small superficial burns should be considered minor and then only when they do not involve the hands, face, abdomen or genitalia. (2) *Major burns*, any burn of more than a few square inches in size should be treated as a major burn and have hospital treatment.

The Principles of Treatment

The principles of treatment are directed towards :—

(1) The saving of the patient's life. Bear in mind that the commonest causes of death in burns are :—during the 48 hours immediately following the accident—*shock* ; from 48 hours after the accident and onwards —*infection* of the burnt surfaces.

(2) The rapid healing of the burns, with regard to full restoration of function of the affected parts and with regard to the cosmetic result, *i.e.*, with little or no disfigurement.

First Aid Treatment

The first step in the management of a severe case of burns is to remove the patient from the danger area and make him as comfortable as possible in a warm place. Of first importance is the early transport to a suitable hospital. Arrange for transport by air ambulance if procurable and circumstances permit.

The aim must be to have the patient under expert care within six hours of the accident before signs of shock begin to occur. It has been found that shock in a case of severe burns without other injuries does not develop until six hours after the accident. Within this period most cases can be safely admitted to hospital. Nevertheless, the general condition will deteriorate from the

time of the accident up to the fourth to the eighth day.

Pain should be relieved. Morphia is the best drug and the dose prescribed is usually ¼—½ grain.

Clothing should not be removed ; the clothes covering the burned area have already been sterilized by heat. Dragging dirty clothing over the burn will infect it.

Cover the burned areas with sterile dressings, simple gauze and a clean towel.

Do not disguise the burns by applying coagulant or dyes. Such treatment completely masks the nature and severity of the injury and interferes with modern methods of treatment.

Examine the patient carefully for other injuries. These are often missed as patients are frequently quite unaware of the extent of their injuries. Immobilize fractures and give appropriate first-aid treatment to any other injuries.

If the patient is able to swallow give him a hot sweet drink. Use a rubber tube attached to a feeder if his lips are burned

Above: the method of feeding a patient with burned lips. Rubber tubing is attached to the feeding cup and the flow can be controlled by the fingers

A great deal of infection of burns and other injuries is due to well-meaning people touching the patient with unclean hands and without wearing masks.

See that the patient is warmly wrapped up for his journey. Hot water bottles and a thermos flask of hot sweet tea should be sent with him. For travelling comfort the injured parts should be well-padded and splinted if possible. This is very important on a long rough journey. Continual jarring of the injured parts is painful and exhausting for the patient.

Hospital Treatment

When the patient is admitted to hospital the main problems are :—(1) The assessment and treatment of shock. (2) The assessment and treatment of any associated injuries. (3) The prevention of wound infection.

Procedure. While the patient is recovering from the journey in a well-warmed bed a rapid assessment of the extent and nature of his injuries is made, with particular attention to :—(*a*) The eyes for corneal or conjunctival burns. (*b*) The mouth for inhalation burns. (*c*) The scalp. Burns of the scalp may be missed at first as the hair is not always completely destroyed. (*d*) Fractures. Fractures of the skull bones, limbs or vertebrae are frequently associated with burns resulting from aeroplane accidents. (*e*) Internal injuries.

The Assessment of shock. The two most valuable guides to a state of shock are :—

(1) The *blood pressure*. If this is below 100 mm. there is evidence of shock.

(2) The *haemoglobin*, which is an estimate of the 'redness' of the blood. This is normally 90–100 per cent. If the reading is over 105 per cent. it is evidence that shock must be expected.

Single recordings of either blood pressure or haemoglobin are of much less value than a series of recordings at intervals of one hour. Not only can the immediate state of shock be accurately estimated but a forecast of what is going to happen can then be made. A falling blood pressure and a rising haemoglobin percentage would indicate that shock if present is getting worse and if not yet developed is coming on, and treatment should be started at once.

The pulse is unfortunately not a very reliable guide to a state of shock. It may be fast or slow. It is normally regular in shock, although it is soft. The blood pressure can be taken by a keen nurse and its record is of the greatest value.

The haemoglobin percentage is usually taken by a medical officer although the technique is easily learnt.

Observe the amount of serous surface discharge. Where the burned area is extensive there will be a considerable loss of body fluid. This surface outpouring of fluid, together with fluid lost in oedema results in a drying up of the blood. This fluid loss is due to actual damage to the walls of small blood vessels resulting in leakage. The total volume of circulating blood is reduced and the heart begins to fail as the blood pressure falls.

Observe the amount of oedema. In severe facial burns the oedema involves the neck, upper part of the chest and shoulders. Pressure on the trachea and swelling of the airways will cause dyspnoea. In some cases tracheotomy may prove necessary.

There may be difficulty in micturition. The urine should be carefully measured and examined for the presence of blood and casts.

Treatment of Shock

For treatment of shock :—

(1) Apply warmth by means of an electric cradle, an electric blanket or hot water bottles. If the limbs are burnt it is better not to warm these, apply heat to the trunk only.

(2) Make up the loss of body fluid :—

(*a*) *By mouth*. Burned patients rarely lose consciousness, advantage of this should be taken by giving the patient plenty of hot sweet drinks. He is usually thirsty and co-operative. The fluid intake and output whether by vomit or urine is measured and recorded.

(*b*) *Per rectum*. If the patient is unconscious or unable to drink well, give warm glucose saline, 5 per cent. per rectum.

(*c*) *Intravenously*. The first two methods are of limited value only, in cases where shock is already established. In such cases fluid loss is replaced intravenously. The ideal method of replacing loss of body fluid is by the intravenous injection of plasma. This should be given slowly into a suitable vein (*i.e.*, not too near a burn), as a continuous drip, at the rate of 10 drops per second. Plasma is the pale yellow fluid which, together with the red and white blood cells forms blood. The fluid that is lost in burns closely resembles plasma. It is, therefore, the best fluid to use for replacement.

Special points to observe when plasma is being given :—

(1) Watch for a painful, brawny swelling near the site of injection. This means that the needle has slipped and the plasma is dripping into the tissues. Clip the tubing and send for the medical officer.

(2) Take care that no air enters the tubing particularly when placing in position a fresh plasma bottle.

(3) Watch for signs of reaction, *i.e.*, rigors or vomiting.

(4) Watch the patient for 'bubbling in the chest'. Chest complications occur if too much plasma is given. Any excess of sputum should be reported.

It is quite safe to give any severely burned patient up to two pints of plasma, after this great care must be taken that too much is not given. The amount given depends entirely on the degree of shock.

Preliminary Cleansing of the Wounds

About twenty minutes before the preliminary cleansing of the wound an injection of morphia, gr. ¼—gr. ½, is given. An anaesthetic is seldom necessary as the sensitive nerve endings have been destroyed in most cases. The clothing is gently cut away and removed by masked helpers.

The most rigid aseptic precautions are taken throughout the dressing of burns. The team method of performing dressings is employed. All dressers and helpers wear sterile masks, gowns, rubber gloves and caps.

The soiled dressings are removed and the burned area is exposed a little at a time and thoroughly, but gently, cleaned. For this C.T.A.B.—cetyl-trymethyl-ammonium bromide—a new synthetic detergent in one per cent. watery solution is the most effective. Alternatively very gentle cleansing with a good quality soap and sterile water is used.

The dead skin and torn blisters are removed, but whole blisters are left intact for seven days. When the area is thoroughly cleaned a 'frosting' of sulphanilamide powder is applied.

Sterile tulle-gras cut to fit the burned area is gently applied

The Status and Duties of a Nurse in Industry.—II

By JOSEPH W. SILVERSIDES, M.B., Ch.B., Medical Officer, Marston Excelsior Limited (Imperial Chemical Industries Ltd.)

LAST week the qualifications and status of the nurse in industry were discussed and some of her duties. Dr. Silversides continues the outline of these this week.

(6) **Hygiene and preventive work.**—The nurse should aim at educating the workpeople on every possible occasion on the question of personal or collective hygiene. Ample opportunity presents itself for this work which includes :—

(*a*) *Voluntary consultations* when the nurse can point out the dangers of sneezing and coughing—if the nose and mouth be not covered. Spitting is another subject which the nurse can deal with by a little unobtrusive and diplomatic propaganda. Cleanliness and the benefits to be derived therefrom can be impressed on the workers during these consultations.

(*b*) *Propaganda.* Much can be done in this direction by organized talks on health matters and by the exhibition of posters in the works with particular reference to air borne infections.

(*c*) *The close supervision* of contacts with notifiable infectious diseases.

The Disabling, Common Cold

(*d*) *Prevention of influenza and the common cold.* If no medical officer is employed the management may consult the nurse with reference to the distribution of tablets and the giving of vaccines, etcetera, for the prevention of these common but oft disabling conditions. I would urge the nurse to obtain medical opinion on the efficacy of these products and not be guided by the all too sweeping statements made as to the value of these substances. A good deal of work is being done on these subjects at present, but there are not, as yet, sufficient statistics available to be definite or dogmatic about these matters.

(*e*) *Vitamins.*—The question of the mass administration of vitamins to workers is another subject which comes under the above heading. Opinions again differ as to the necessity for the addition of these substances to the diet as a food factor and any physical benefits which might accrue from their administration. A great deal of good work can be done by the nurse in persuading the workers to make more use of the canteen, particularly if the meals served are well balanced—which is not always, unfortunately, the case.

(*f*) *Germicidal sprays.*—The use of germicidal sprays in the factory for the prevention or reduction of air borne infection is another subject which the nurse may be consulted about. Again opinions are divided as to whether it is worth while carrying out this procedure in large workshops. The germicidal action—in the strength which these solutions are used and the methods used in distributing them through the atmosphere is, I think, very doubtful. They do, however, help to reduce the dust, and, owing to their perfume—pine, etcetera, they have a definite beneficial psychological effect on many workers.

(7) **Auxiliary Health Services.** Various auxiliary health services are in operation in many factories, but I only intend to deal with the following two :—

(*a*) *Ultra violet ray therapy.*—This form of treatment has definitely, in my opinion, proved itself worth while in industry. Many workers to-day, though not actually ill in the accepted sense of the word, are showing signs of fatigue or are in a state of sub-total fitness. The causes are apparent to anyone employed to look after the health of the workers in industry. It is in these cases where I have found ultra violet ray treatment to be of great value. If there is a works' medical officer it will be his responsibility to decide who shall receive treatment and the dosage to be given. I am greatly concerned, however, about factories where no doctor is employed. In these cases I do not think a nurse should accept responsibility for giving treatment to all and sundry unless she has received some special training in this subject. In any case, I feel very strongly that all persons before receiving treatment should produce a certificate—from their own private practitioner if there is no works' medical officer, stating that the person is a suitable case for receiving this form of treatment. There are definite contra-indications to this treatment—conditions where exposure may be definitely harmful, *e.g.*, particularly sensitive skins, cardiac weakness and some tuberculous conditions.

When treatment is given by a nurse she should confine herself to tonic doses. Therapeutic dosage should only be given under direct medical supervision.

(*b*) *Radiant heat and infra red ray therapy.*—This is a useful mode of treatment in many conditions when skilfully given—but here again I feel that the nurse should not give this kind of treatment unless she has received special training or is working under direct medical supervision. Nurses working alone will, by contacting the worker's own doctor, usually find them most co-operative in obtaining continuity of treatment for their patients. By this means people can often be kept at work or their recovery expedited.

A Teacher of First Aid

(8) **First aid and A.R.P. training.**—The nurse has a definite place in industry in the teaching of first aid and the training of A.R.P. personnel. I am of the firm belief that doctors only should deliver lectures on first aid—but the nurse should be able to take the practical part of the course. To do this satisfactorily the nurse herself should have attended a course in first aid and taken the examination for the certificate under the auspices of either the St. John Ambulance Association or British Red Cross.

The teaching of the first-aiders should be based on one of the official handbooks, and at a later date a more advanced or specialized course might be given, paying particular attention to the treatment of conditions likely to arise in the particular factory concerned. Once again I would like to stress the importance of the recognition of shock and the correct treatment of this condition, the correct methods to be adopted for the control of haemorrhage, the necessity for the immobilization of fractures, and the correct application of artificial respiration—a manoeuvre which is usually carried out very badly by first-aiders. It is of great benefit and an incentive to the first-aiders if they are allowed to spend a few hours weekly or monthly in the ambulance room—viewing the methods adopted by the nurse in the treatment of casualties and, if possible, being allowed to treat a few cases under her supervision. It should be the duty of the nurse to see that the first aid satchels—for A.R.P. use—are properly stocked and kept in appropriate positions in the factory and in the shelters. She should also be responsible for the stretchers, blankets, hot water bottles and the various stock solutions which are necessary in case of an air raid. A course in home nursing can also be undertaken by the nurse amongst the female employees.

An Index to Value

(9) **Record keeping and statistics.**—Record keeping is an irksome business to most people, but the nurse should not be in this category—for it is an essential part of her duty and one which is not only useful for statistical purposes but is an index and the only true guide as to the work done in the ambulance room and of the value of the nurse to industry. What then is the necessary minimum of record keeping a nurse should do? I would suggest the following :—

(*a*) *Personal record.*—An index card should be kept of all employees. On the front of this card under the appropriate headings should be entered the details mentioned earlier under the heading of 'Examination of Prospective Employees.' A further heading to be filled in when interviewing a prospective employee should be industrial history—noting particulars of previous occupations, time served, where employed and reasons for leaving. The back of this card can be used for various items such as further examinations by doctor or nurse, reason for examination, lost time due to accidents or sepsis, etcetera, etcetera. These cards are confidential documents, and should be carefully locked up and seen only by doctor or nurse.

(*b*) *Treatment book.*—In this book should be entered certain particulars relating to every person reporting to the ambulance room for treatment of either accident or illness. The following are the particulars :—

Date, name (surname and initials), check number, department, condition found (if an accident, the time of accident should be

recorded), treatment given, time of treatment, disposal, initials (of person giving the treatment). If the case be one of illness the temperature and pulse rate must be taken and duly recorded, and it is an advantage to record all sickness cases in a different coloured ink.

Under the heading 'disposal' it should be clearly indicated whether the patient has been instructed to resume duty, to be sent home, referred to own doctor or sent to hospital. If the case be one of accident, requiring suspension from work, a chit to that effect should be sent to the labour officer, the safety officer and to the foreman—a copy being retained in the ambulance room.

A similar procedure should be adopted in cases suspended owing to illness—the chit to the safety officer being omitted in this case. All redressings should be clearly indicated in the treatment book. From the particulars entered in this book a monthly summary should be prepared and presented to the management. I would suggest the following headings be used in the summary :—

(1) Total number of cases –
(2) Industrial accidents (1st Dressings = and Redressings =)
(3) Non-industrial accidents (1st Dressings = and Redressings =)
(4) Industrial sickness cases (1st Attendances = and Subsequent Attendances =).
(5) Non-industrial sickness cases (1st Attendances = and Subsequent Attendances =).
(6) Ultra violet ray treatments (No. of persons = Total No. of Treatments given =).
(7) Infra red treatments (No. of persons = Total Treatments given =).

Special statistics as required by the medical officer or the management can easily be obtained from the treatment book—for example, injuries involving the fingers and hand, eye injuries, burns and scalds and septic cases, etcetera, etcetera.

These statistics when correlated with those obtained from the labour department (certificated absenteeism) are both interesting and of great value both to the doctor and the industrialist. The total man hours lost due to injuries, septic cases and illness under various headings, *e.g.*, cardio-vascular, respiratory, alimentary, rheumatism, influenza, etcetera), the accident rate and severity rate are all of inestimable value.

Valuable Information

(10) **Medical social services and outside contacts.** This includes knowledge and information on :—

(*a*) *Sick Visiting.*—Some firms run their own sick club, and in connection with this the nurse may be required to do a certain amount of sick visiting, or to interview in the ambulance room people who are well enough to visit the works in order to draw their money. There is a part for the nurse to play in rehabilitation. People could often return to work much earlier than they actually do if arrangements could be made for them to be put on some lighter or less arduous task for a while. It is in this way the nurse can help by making the necessary suggestions to the labour and welfare officers in suitable cases.

(*b*) *Convalescent care.*—In co-operation with the patient's own doctor and on the recommendation of the works' medical officer (if one is engaged) the nurse should, by her knowledge of the various convalescent organizations, be able to arrange for a period of convalescence to be spent in one of the many homes, in order to expedite and complete the process of recovery to health.

(*c*) *Hospitals, clinics, etcetera.*—The nurse should have at hand, for reference, a complete list giving the times at which the various hospital out-patients and clinics are held. It is her duty to arrange that workpeople should be allowed time off to attend these clinics when necessary. It is a rule in most firms that employees are not allowed to leave the factory to obtain treatment during works' time unless they have a pass out chit signed by either the medical officer or sister in charge. Many of the treatments prescribed at these clinics (dressings and injections, etcetera), can be efficiently carried out in the ambulance room, thereby preventing loss of time and interference with production. A note to the hospital and to the patient's own doctor usually brings about active co-operation. The nurse by her privileged position can bring home to the female employees the dangers of untreated venereal disease and the necessity for early and continued treatment until a cure is pronounced. She can greatly assist by arranging time off work for infected cases to receive treatment at the clinic. Special diets and refreshment meals are frequently prescribed at hospital out-patients and by doctors. The nurse should make the necessary arrangements with the canteen manageress for these instructions to be carried out as far as possible.

(*d*) *Works' council.*—Where there is no medical officer the nurse may be required to attend meetings of the works' council, particularly when matters affecting the health of the workers are being discussed.

The Future

There is in my opinion a great future for industrial nursing and nurses. As I have stated earlier an industrial nurse should be State-registered and should, wherever possible, take the diploma in industrial nursing. The possession of this diploma will, I hope, be a compulsory qualification after the war for a sister in charge. Where there is one or more State-registered nurses employed in a factory some assistant nurses can usefully be employed—but if there is only one nurse she should definitely be State-registered. In factories too small to usefully employ a State-registered nurse, *i.e.*, under 100 workpeople, an assistant nurse could be employed, and I can foresee in the future that these various small factories in one district could be under the supervision of a State-registered nurse.

Industrial nursing, as I have said previously, is unlike any other branch of nursing. The duties are partly curative, partly preventive and partly educational. It is, therefore, the duty of the nurse to equip herself with all the knowledge procurable for her important task, so that she is in a position to speak with authority and so be able to educate the employees, and in many cases employers of labour, who have little idea as to the duties which fall to the lot of a nurse in industry. The nurse works for a firm, but she is really the servant of industry, and by her efforts she can assist production, reduce the incidence of sickness and lost time, and so help in preventing the disruption of the home life of the workers. Her work then is of national importance, and it is up to the nurse to make herself indispensable in the industrial world.

Book Reviews

WOMEN AT WAR.—*By Margaret Goldsmith. (Lindsay Drummond Ltd., 6, Buckingham Street, W.C.2 ; price 10s. 6d.)*

THE circumstances of this war, so different from the last, make the portrayal of women's part in it a difficult task, but nevertheless, 'Women at War' is a disappointing book. The author, an Amreican, does not seem to have got quite beneath the English skin. She has, too, concentrated on the more spectacular forms of war service, interviewing those at the top rather than the woman at the wheel.

Three long chapers, she devotes to the women's services ; others to women in civil defence, women in industry and women on the land ; the teaching profession receives only a passing comment. Nursing she includes in the chapter on Women in Business and the Professions, quoting a letter from Lord Luke to *The Telegraph* and referring to the shortage of nurses with a casual reference to their heroism in raids. Fewer phrases and more facts would have made her subject more worth the reading.

IT WAS DIFFERENT AT THE TIME.—*By Inez Holden (John Lane, The Bodley Head, Ltd., 9, Galen Place, London, W.C.1. ; price 4s. 6d.).*

WRITING her way through the Munich crisis and the early years of the war, Inez Holden gives vivid pen pictures of her experiences, among them her training as a Red Cross auxiliary at a London County Council hospital, and later at a first aid post.

Unlike most of the fiction writers of hospital ways, the author has no axe to grind but depicts what she sees, finding the self-contained hospital life, from the point of view of both nurse and patient of absorbing interest. 'The hospital,' she writes, 'seems like a large enclosed space of safety, and a nurse's life, in a sense, a very sheltered one.' In another passage she states : 'Before coming here, I had a fixed idea that every hospital matron was half Fuehrer, half Florence Nightingale. But the matron in this place is no such composite character. She is more like an Edwardian hostess, rather remote and with an affectation of graciousness. . . the assistant matron and the sisters were all spontaneous and friendly.' A charming book for those who read for recreation.

D.J

NUTRITION OF INFANTS AND CHILDREN WITH SOME REFERENCE TO WAR-TIME PROBLEMS

II.—Feeding Methods

By A. DOYNE BELL, M.A., M.D., M.R.C.P., Physician in Charge, Children's Dept., Queen Mary's Hospital for the East End, E.15

HAVING outlined the nutritional requirements of the infant, the remaining problem is to devise methods for presenting a diet which fulfills these requirements and is acceptable to the infant's limited powers of digestion. It has already been pointed out that cow's milk protein consists of over 80 per cent. of caseinogen, whereas in breast milk this protein only occurs as 30 per cent. of the total protein. This preponderance of relatively indigestible protein makes some modification of the cow's milk necessary if successful digestion is to occur. Such modification may be achieved by subjecting the cow's milk to one or more of the following processes: (*a*) dilution; (*b*) boiling; (*c*) drying; (*d*) condensing; (*e*) acidification; (*f*) pre-digestion; (*g*) alkalinization.

(*a*) *Dilution.* Though some infants will be found able to digest undiluted cow's milk from an early age, generally speaking some dilution of the milk is desirable. It has been seen that the infant does not need as much protein as would be supplied by a diet consisting of whole cow's milk. Dilution is, therefore, usually practised and a suitable dilution (that is, in supplying the infant's fluid and protein needs) is achieved by adding 1 oz. of water to 1½ oz. of cow's milk. Such a mixture of milk and water will, of course, be deficient in caloric value, and carbohydrate and fat must be added.

(*b*) *Heat.* The application of heat to cow's milk, whether by boiling, drying or condensing the milk, has two effects both of which are favourable to the infant. Firstly, heat sterilizes the milk, killing any injurious organisms which may be in it; secondly, it renders the protein more easily digestible in the infant's digestive tract. It is desirable, therefore, that all milk given to infants should be subjected to heat for a sufficient length of time to ensure the destruction of harmful bacteria.

Dried and condensed milks. Remember that full cream dried milk, no matter whether national or some proprietary brand, is milk reduced to one-eighth of its weight by drying. 1 drachm, therefore, can be reconstructed to make 1 oz. of milk by adding water. Unsweetened condensed milk has been reduced to one-third of its original bulk—2 oz. of water added to 1 oz. of condensed milk reconstructs the original whole milk. Remembering these two facts makes infant-feeding easy; vague dabbling amongst the bewildering variety of 'modified' or 'humanized' patent infant foods makes the job difficult.

Acid milk. The adding of lactic acid to milk (which must first be heated to sterilize it) precipitates the casein as a fine, easily digestible curd. The curd is further more easily digested, because it calls for less acidification in the child's stomach. This method of milk-curd modification is very useful in infant feeding, especially when relatively large quantities of protein are needed. Lactic acid can be added not only to cow's milk, but to reconstituted, dried or condensed milks.

Predigestion. The predigestion of milk by the use of pepsin or pancreatic extracts is useful in certain debilitated and malnourished infants. It is not always very simple in practice and has no place in a discussion of the feeding of the normal child.

Mixed Feeding

At the age of about six months the introduction of solid or semi-solid foods should be started. In many cases such additions are not dietetically essential, but there is great advantage to be gained by accustoming the infant at an early age to the feeling of swallowing solid food. Such solid foods are given by spoon and, in the case of the breast fed infant, the result is that weaning from the breast at the age of 8 or 9 months does not entail the use of a feeding bottle.

The first type of solid food to be introduced should be some cereal such as oatmeal or barley. The advantage of these is that the mixture can be made relatively fluid at first and more substantial as soon as the child is used to the spoon. There are still a great number of patent cereals on the market, all of which claim advantages which can hardly be substantiated in practice. A simple gruel or porridge of oatmeal or barley is all that is needed. It has been shown that the traditional prolonged cooking of these cereals is not necessary. The starch granules are adequately split after 10 to 15 minutes boiling. My practice is to introduce a gruel of medium oatmeal before the breast feed or bottle-feed at 10 a.m.

A few weeks later green vegetables may be given before the 2 p.m. feed. For the first few days it may be necessary to sieve the vegetables, but the child will soon get used to the feeling of rougher food in the mouth and the somewhat tedious process of sieving vegetables can soon be dispensed with. The vegetable purée should be moistened with gravy if it is available or with milk which may be flavoured with a little Marmite. I know that the time-honoured vegetable broth is still recommended, and recipes are still given in which mothers are urged to simmer veal bones for seven hours. Such methods result in great waste of time and fuel, and the resulting decoction contains little more than gelatine and extractives and has no particular food value.

There are two food stuffs which the war has brought us and which are of great value in infant feeding, but which are still viewed with some suspicion by the public—dried egg and dried skimmed milk. Both these substances are rich sources of first-class protein and are well tolerated by children from an early age. The skimmed milk is not, of course, to be considered a substitute for full cream milk, but the Government Advisory Committee on Nutrition says: 'It stands next to whole milk in the order of nutritive value of foods and differs from the latter only in so far as it contains very little of the fat with its attendant vitamins A and D'. The dried egg powder, similarly, is an admirable food that can be introduced at an early age. Apart from its protein content, it is rich in iron.

When the infant has cut his first teeth, really solid food such as hard-baked rusks can usefully be given. Here again the pre-war use of branded foods has led to some confusion in many mothers' minds, and I often find mothers in despair because they cannot buy some patent rusk which they believe to be peculiarly nutritive. The best rusk can be made by the slow baking of fingers of bread cut from a stale loaf. Cheese as a source of first class protein has been much neglected in the past. Grated cheese can usefully be given as early as the seventh month and, as soon as the teeth erupt, sticks of cheese to bite are well tolerated by the child.

Tinned Food for Babies

Tinned foods have in the past had a bad reputation or at least have been regarded with suspicion. Parents who have themselves eaten tinned foods for years have hesitated to give them to their children, but there is no reason for this. In fact, sardines and pilchards, for instance, have a high nutritional value, and are entirely appropriate additions to a young child's dietary.

It is impossible in the time available to give details of the many sources of food available for feeding the young child in war-time, but I hope I have made it clear that, in spite of certain limitations, there is still a large variety of good substances available for the nutrition of even the quite young child, if only they are properly cooked and presented and if old prejudices are forgotten.

As to the methods of preparing these foods, I cannot do better than refer you to the many excellent pamphlets prepared by the Ministries of Food and Health.

There is one aspect of child nutrition upon which I have not touched, and which is deserving of your serious consideration both now and after the war, and that is the question of the communal feeding of children of various ages. The establishment of war-time nurseries has necessitated the serving of mass meals in schools and nurseries, and this has both advantages and disadvantages. Clearly the difficult and faddy child will benefit by feeding in the company of children with normal healthy appetites. The meals served are likely to be of adequate and balanced nutritional value and to be served punctually. If

(*Continued on page* 834)

(*Continued from page 827*)

with sterile forceps. This is covered with dry sterile gauze and wool and a light pressure crepe bandage put on. Tulle-gras is an open mesh netting soaked in sterile vaseline with one per cent. balsam of Peru, and sterilized in the autoclave.

The bandage may be secured by strips of adhesive plaster in order to prevent the dressing from slipping and exposing the wound to infection. The bandage must be applied with both the future function and the present comfort of the burned area in mind.

Burned hands should be firmly bandaged in a basic position with a view to their early recovery of function. To assist in maintaining this position and prevent deformity, and also to aid in elevation, a light metal splint is invaluable. The elevation materially reduces pain and swelling (see page 826, first picture).

The fingers must be carefully separated by strips of tulle-gras to prevent webbed fingers.

Where the axilla is burned the elbow should be nursed on pillows to permit of full abduction. Burnt tissues on healing contract producing deformity and limiting the movement of joint unless checked.

Where the buttocks are burned the patient is nursed in the semi-prone position and made as comfortable as possible with pillows.

Where the face is burned particular care must be taken to avoid infection. The mouth and nostrils cannot be completely covered and germs gain access to the burned area through these openings.

For this reason the face requires to be dressed more frequently than other areas. Particular attention is paid to the eyes. They should be covered in such a manner that they may be bathed out frequently and paroleine drops inserted. The mouth and nostrils must be gently cleaned as often as necessary.

In other burns where the preliminary cleansing is satisfactory the dressings should be changed only when the medical officer considers necessary. Daily dressing is not essential.

Great care must be taken when renewing burns dressings to be as gentle as possible. It is important to gain the patient's confidence and co-operation.

Saline baths are useful for :—(1) The painless removal of dressings. (2) For the restoration of function. (3) For the mechanical cleansing of the wounds particularly those of the trunk and perineum. The use of saline baths should be limited to specially trained staff. Special care and sterilization of bath and fittings is essential if the risk of cross infection is to be avoided.

The technique of bath sterilization. Staff wearing face masks and rubber gloves clean the bath and any fittings with ' vim '. Then the plug is placed in the bath waste and 16 oz. 1 in 10 ' Lysol.' poured in. The bath is mopped thoroughly with this. Afterwards it is thoroughly rinsed with clean water and prepared for the saline bath.

When renewing dressings gently remove all debris both from the wound surface and from the healing edge by means of tapering toothless dissecting forceps. Do not burst whole blisters until the seventh day. By then the burn will be found to be completely healed. Keep the healed skin well lubricated with olive oil or lanoline. There are no sebaceous glands in the healed skin after a severe burn to keep it soft and plastic.

Keep limbs elevated as the new skin is forming, when dependent they become swollen, blue and painful. Later, in the case of legs, a firm elastic crepe bandage should be worn when walking.

Exercises are most important towards the full restoration of function. Particularly in burns of the hands, legs and axillae The patient must be encouraged in these exercises from the beginning, particularly during dressing periods.

Legs may be placed on a plaster back splint in order to prevent footdrop.

Massage by a trained masseur is useful when the burn is healed, so too are oil-baths. As the area heals modified splints may be employed in order to correct deformities early.

Wound Infection

Unless the most stringent aseptic methods of dressing burns are employed wounds quickly become infected. For this reason it is wise to swab the wound for bacteriological culture each time it is dressed.

Infection by the haemolytic streptococcus is dangerous ; because it causes extensive breakdown of healed areas and may cause general septicaemia. It results in a sudden rise of temperature and pain in the wound with glandular enlargement.

This is treated generally by sulphathiazine tablets by mouth and locally by the application of sulphanilamide powder applied to the wound by an insufflator or sterile pepper pot.

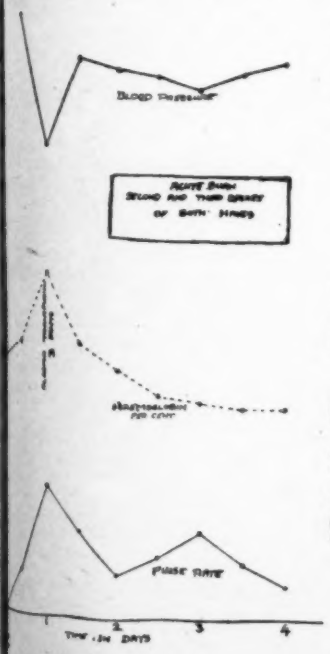
Infection with the staphylococcus results in the formation of thick pus which soaks through the dressings and smells. This infection will benefit by the same treatment.

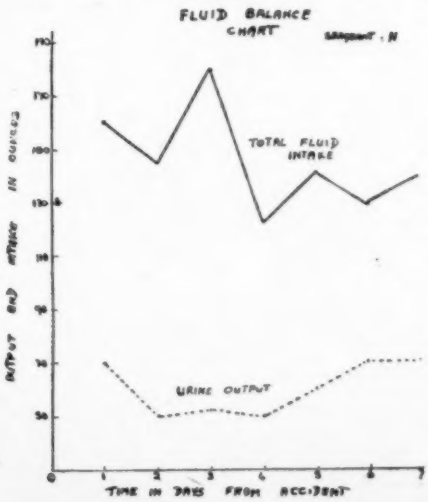
Infection by the *Bacillus pyocyaneus* results in the formation of blue pus which has an unpleasant odour. It is best treated by the local application of albucid powder.

Infection by the *Bacillus proteus* results in the formation of pus which smells like fresh hay. This does not respond to local

CARE OF THE EYES IN A CASE OF FACIAL BURNS

Right : *a patient with healing facial burns wearing the standard anti-gas eye shield to protect the cornea until grafting can be undertaken to enable the patient to close his eye*





Left : *chart showing the blood pressure curve (top), the haemoglobin curve (middle), and the pulse rate curve (bottom).* **Below :** *fluid balance chart showing the total fluid intake and the urine output for one week after the accident. Note the falling output when the intake is at the maximum owing to fluid retention to compensate fluid loss*

application of sulphanilamide powder or any agent. It is not serious nor does it delay healing although preventing the take of a skin graft.

Cosmetic Results

In cases of major burns an early skin graft shortens the stay in hospital by weeks. It is a most valuable measure. In satisfactory cases the wound area should be free from sloughs and ready to receive a graft at the end of one month.

Early contracture of the eyelids resulting in failure to close them causes the patient to sleep with his eyes open. The exposure and drying of the cornea leads to a sore irritable eye which may go on to ulceration. This can be prevented by the frequent instillation of liquid paraffin drops and the wearing of an eye-shield such as the standard pattern issued to all service personnel. This shield helps to prevent infection until the patient is ready for the insertion of a suitable eye graft.

Later the scar tissue may be excised and replaced by grafts spaced over a period of months in order to obtain the best cosmetic results.

Points to note. Saline baths are most useful for the mechanical cleansing of infected wounds where daily dressings are necessary, particularly where large areas are involved.

There will be a primary place for penicillin in the treatment of burns in the future when supplies become available. It is incomparable in its action against sulphonamide resistant haemolytic streptococci and staphylococci, often rendering the wound sterile after two or three applications at 48-hourly intervals.

For the Student Nurse

Answers to the State Examination Questions
By the Sister Tutor Section, Royal College of Nursing

PART I.—ANATOMY AND PHYSIOLOGY AND HYGIENE

QUESTION 6.—*Write a short account of the various ways by which infectious diseases may be transmitted.*

Infectious diseases may be transmitted in a variety of ways :—

(1) Infectious diseases such as measles, diphtheria, scarlet fever may be spread from one person to another by direct contact, or,

(2) As is the case in syphilis, erysipelas or tetanus, where a wound or abrasion of the skin is present, the germ may gain entry to the abraded surface by direct inoculation.

(3) Pathogenic organisms may be conveyed in the air by infected droplets expelled from the respiratory tract in coughing sneezing and talking, or in dust. If these particles are inhaled by susceptible persons, the germs may multiply and reproduce, diseases such as pulmonary tuberculosis, the common cold, influenza, whooping cough, cerebro-spinal meningitis and diphtheria.

(4) Food, including milk, may be contaminated by dust, flies or carriers, and when consumed, may give rise to diseases such as the enteric group of fevers, dysentery, cholera, summer diarrhoea and food poisoning. These diseases may also be carried by the drinking of water contaminated with sewage and by eating fresh fruit, or raw vegetables which have been washed in contaminated water.

(5) Milk. The germs causing bovine tuberculosis and glandular fever in man, may be transmitted by the drinking of milk obtained from cows suffering from tuberculosis and abortus fever respectively. Diphtheria and the streptococcal infections, i.e., scarlet fever and sore throats, may be caused by milk being contaminated either by the cow or milker during the process of milking or during delivery.

(6) Insects may transmit diseases. Certain species of mosquitoes convey malarial fever and yellow fever. The tsetse fly transmits sleeping sickness from one person to another.

(7) Vectors or carriers, *i.e.* parasites such as lice which transmit typhus, rat fleas which transmit plague, and parrots which transmit psittacosis.

(8) Substances which have been in contact with an infectious disease, such as clothing, books, toys are capable of transmitting diseases like tuberculosis, typhoid fever and measles. Pathological germs from the excretory organs are perhaps the most dangerous in this respect. Man may become infected with anthrax from handling the hides or the wool of infected animals, or by using a shaving brush made with contaminated pig bristles.

NUTRITION OF INFANTS AND CHILDREN *(cont. from page 832)* supervision is adequate the children's table manners should improve, and this question of table manners is more important than is sometimes thought. The ill-nourished child is often a child who will not sit at table and whose mother is too indulgent or ignorant to insist on this point. On the other hand it may be argued that communal meals may lack the interest of those served by an intelligent mother, and if there is inadequate supervision of a large number of children, the 'difficult child' may escape notice. In short, the institution of mass meals for children has both advantages and disadvantages, and for their success, imaginative catering and careful supervision are essential.

The war has brought to the fore certain problems in nutrition as it has those of housing. The fact that people are aware of them, that they are facing them and that they have to some extent solved them is a great advance. That there is a lot of controversy shows that the subject is alive. Do not believe everything that is said, but examine it and, if you think it good sense, incorporate it in your observations and teaching.

A Happy Gathering at Leeds

Branches Standing Committee, Quarterly Meeting

It was a happy coincidence for the Branches Standing Committee Quarterly Meeting to take place in Leeds when the Yorkshire Branch at Leeds celebrated its twenty-fifth birthday. The meetings attracted representatives from all over the country—from Exeter and Portsmouth in the south to many points north of the Border. Miss Burbury, matron of the General Infirmary at Leeds, welcomed the Branch representatives and entertained them in the nurses' recreation room, by kind permission of the authorities, in a most generous and convenient fashion. Of special interest was the message from Miss E. S. Innes, former matron of the Infirmary, and member of the College Council who presided twenty-five years ago when College members from all parts of Yorkshire met together for the first time and formed the local branch. Unfortunately, she could not attend herself, but sent greetings to all.

The morning was occupied with reports from various officials. Miss Christie opened the proceedings by telling of 111 branches now formed—a very satisfactory number—of which 54 only had sent in quarterly reports—not quite so satisfactory, for it was less than 50 per cent. of the total. However representatives of other branches gave reports from the floor during the afternoon session.

Area Reports

First the Area Organizers told of the activities during the quarter, and from every side came news of interesting lectures and discussions, week-end courses, study-days, new ward and departmental sisters' groups, and social events, with the raising of money for clerical help or duplicators to help in branch work for educational purposes and for various charities.

Miss Christie, Eastern Area, told of various educational activities, and particularly mentioned the work of the ward sisters groups, especially very live groups at Brighton and Hove and Worthing. Miss Montgomery, Northern Area, reported two new branches nearly ready to get into action and study days in Sheffield, Leeds and Wakefield, a group of branches in the North East preparing for similar activities, and a well attended special course for ward sisters in Manchester. She also told of the presentation of £1,000 by the Bradford Branch and city to the *Nursing Times* Fund for Malta's Nurses of Britain Ward. Miss Adams for the Western Area reported a new sub-branch in Redruth and three very active Ward and Departmental Sisters' Groups in Winchester, Bristol and Bath, among many other activities.

Miss Warren, Midland Area, reported a new branch formed at Peterborough, and the revival of the Scunthorpe Branch of the College, a successful exhibition at Grimsby which raised a large sum of money for Malta, post-certificate courses in Nottingham and Coventry, and the beginning of a Diploma in Nursing course in Birmingham University, an interesting educational development which College members in the Midlands should be glad to hear about : 27 students were taking the course.

Miss Stewart, for Scotland, told of Miss MacManus's visit in July : a 'royal tour' full of inspiration and attracting members from Wick to the Border counties. She reported the formation of the Perth Branch, the need felt for post-certificate education in Scotland and the keen discussions among the ward and departmental sisters groups on such points as the 96 hour fortnight, the marking of teaching charts for ward work, newly introduced in Scotland, and similar problems.

Next came the report of the Education Department at Headquarters, where courses for nurse and midwifery teachers, industrial

(Continued on page 839)

'FISSAN'

Regd. Trade Mark Brand

ANAL OINTMENT and SUPPOSITORIES for HAEMORRHOIDS

Extensively prescribed by the medical profession, 'Fissan' Anal Ointment and 'Fissan' Anal Suppositories may be recommended with perfect confidence in their ability to provide that relief and comfort so much desired by sufferers from piles and other anorectal disorders.

Both preparations contain astringent, healing, antiseptic and antipruritic principles of established value, incorporated in a special emollient base.

Characteristic of their use is the resulting prompt relief of inflammation and congestion; this is accompanied by the elimination of the intense itching and soreness common to the complaint and rapid healing of the affected tissues, leading to a restoration of normal habits.

'Fissan' Anal Ointment with Applicator (in tubes) **1/8** including Tax.

'Fissan' Anal Suppositories (boxes of 6) **1/8** including Tax.

Larger sizes available for hospital use.

GENATOSAN LTD.,
LOUGHBOROUGH, LEICESTERSHIRE.

Denture Cleanliness

THE KOLYNOS WAY

Care of dentures is as important as care of the teeth. Kolynos Denture Powder, used in conjunction with a stiff brush, has proved a reliable medium in the effective cleansing of the dental plate. A safe and efficient stain-remover, it is harmless to all bases normally used in prothesis—and does not impair durability. Kolynos Denture Powder can, therefore, be recommended with complete confidence.

INDIGESTION
DURING PREGNANCY

An excessive tendency towards indigestion, heartburn and sickness during pregnancy causes loss of sleep, loss of appetite, and consequently loss of health. These distressing symptoms MUST, therefore, be counteracted without delay by the administration of a good antacid. 'Bisurated' Magnesia is a simple and quick-acting stomach-acid corrective, and has been described and recommended for digestive troubles by many Physicians and Maternity Nurses for over 25 years. 'Bisurated' Magnesia powder and tablets are obtainable from all chemists at prices from 7d. to 2/10 including Purchase Tax.

'Bisurated' Magnesia

GENERAL NURSING COUNCIL FOR ENGLAND AND WALES

THE General Nursing Council held its October meeting on October 22, with Dame Ellen Musson in the chair. Arising out of the minutes was the report that Frances Victoria Quigley had been ordered to pay a fine of £5 and £2 2s. costs at Liverpool, with one month for payment, for posing as a State-registered nurse; also that Lilian (or Lillie) Elliott was fined £5 at Sheffield on October 7 for the same offence. The meeting between the General Nursing Council for Scotland and the Joint Nursing and Midwives Council for Northern Ireland, the recommendation of the Education and Examination Committee at the meeting on September 24, (see *Nursing Times*, October 9) would take place on November 19.

The Finance Committee presented various bills and estimates which the Council duly passed, and from the Registration Committee came application for the approval for registration of 32 applicants: on the General Register, by reciprocity, four; on the supplementary part of the Register, by examination, 17, by reciprocity, eleven; these the Council approved, together with the re-inclusion of the names of 84 nurses on the Register who had now paid their retention fees. The Council also sanctioned the issue of six duplicate certificates and 35 badges. The date for the election of Council was to take place in December, 1944, provided that the requisite paper and staff was available. This Committee also reported that copies of Registers of Nurses had been received from the Nurses Board of Victoria and the Madras Nurses and Midwives' Council.

Referring to the letter of the Ministry of Labour, referred by Council on September 24, to the Education and Examination Committee, this Committee reported that, in its opinion, the time was not yet opportune for putting into force the suggestion that training in tuberculosis nursing should be compulsory which recommendation Council approved.

Approved Training Schools

The Council approved the following applications as affiliated training schools for a period of two years from October 22:—

Preston Isolation Hospital with Monsall Hospital, Manchester: Lord Mayor Treloar Cripples' Hospital and College, Alton, with Royal County Hospital, Winchester; Lord Mayor Treloar Cripples' Hospital and College, Alton, with the Westminster Hospital; Lord Mayor Treloar Cripples Hospital and College, Alton, with the Hospital for Sick Children, Gt. Ormond Street; Bagueley Sanatorium, Altrincham with Crumpsall Hospital, Manchester.

In addition, continuance of approval was granted for two hospitals as training schools:—The City Isolation Hospital, Headington, Oxford and the Sheriff Hill Isolation Hospital, as complete training schools for fever nurses.

Pre-nursing Courses were agreed at St. Pancras Parliament Hill School, London, for Part I of the Preliminary Examination. As a result of correspondence with the Board of Education, the pre-nursing course at the South Devon Technical College, Torquay, received approval to hold a one year course, and the permission to hold a two year course was cancelled.

Office Routine

Between September 6 and October 2, the General Purposes Committee reported that the Council had received 62,616 letters and despatched 41,132; Interviews numbered 337 and permits issued for registered uniform, 265, whilst the Assistant Nurses Committee reported that Miss R. Dreyer, Mrs. W. L. Ford, Miss L. Snowden and Miss E. C. Pearce had been appointed to consider the course of instruction to be set up for assistant nurses and the type of examination that they should take.

Disciplinary Cases

The Council discussed *in camera* the cases of Catherine Mary Harrington and Jeanne McDougal, deciding that their names should be struck off the Register. On the case of another State-registered nurse, S.R.N. 107,880 the Council postponed judgment for a period of twelve months from the date on which her case appeared before the Courts.

Date of next meeting: November 26.

STUDENT NURSES' ASSOCIATION

The local units of the Student Nurses' Association welcomed Miss MacManus, O.B.E., Matron, Guy's Hospital and President of the Royal College of Nursing, at their meeting held in the Guildhall, Swansea, recently.

Miss E. G. Williams, chairman of the Swansea General and Eye Hospital unit, was in the chair, and opened the proceedings by welcoming Miss MacManus to Swansea, and welcoming nurses from hospitals in the surrounding districts. Guests of the evening were nurses from Llanelly General Hospital and Hill House Isolation Hospital, Swansea.

Miss MacManus gave an inspiring address upon the ideals of a nurse, mentioning that nursing was one of the few professions where hands as well as brains were necessary.

Amongst the questions asked, it was decided to deal with the most amusing one at once Miss G. Thomas, of Swansea, General and Eye Hospital raised the ever-burning question of nurses' footwear. Miss Thomas stated that whilst the *Nursing Times* had lately published numerous leading articles upon the subject of nurses' health they had forgotten sore and weary feet which caused frayed nerves (See *Nursing Times*, July 17—ED.) This caused much amusement and applause and it was decided to send in a recommendation to the Board of Trade, through the Royal College of Nursing, that two pairs of shoes (coupon free) as well as fully fashioned stockings should be supplied to nurses. This motion was seconded by Miss T. Mainwaring of Tawe Lodge Infirmary, Swansea.

Miss J. Joseph Davies of Swansea General and Eye hospital questioned the bridging of the gap between student nurses completing training and the Royal College of Nursing. She said that it was felt generally that student nurses finishing their training did not attend the Royal College of Nursing meetings as they should or as they would like, simply because they felt swamped. Miss Adams answered this question stating that student nurses had just to go to these meetings at completion of training and make themselves felt, stating that after all youth in numbers could carry a meeting.

Miss V. Blewett of Swansea General and Eye Hospital, asked why Wales should not have its own representative, as it was felt that a candidate in, for example, Exeter could not possibly know of the problems of the student nurse in Wales. Miss Adams replied that it was up to Wales to demand its own representative.

Miss Lewin of the City Isolation Hospital, Cardiff, asked whether clubs could be founded in other towns and cities apart from London. Miss Adams replied that war conditions and finances prevented this being done at present, but it was assured something would be done in the future.

The meeting closed with a vote of thanks to Miss MacManus and Miss Adams, proposed by Miss M. Jones, of Tawe Lodge Infirmary, and seconded by Miss E. O'Brien, Swansea General and Eye Hospital.

THE ADVANCE OF MEDICINE

13.—The Age of Invention

AMONG the many lines of investigation of importance in the nineteenth century, some of the most remarkable depended on the discovery of new methods. Just as the microscope had opened unexplored fields of research, so the rapid progress of physics and chemistry had placed more exact methods of observation and measurement within reach of the physiologist.

But the application of these methods was attended with great difficulty; there were no laboratories, instruments or capable mechanics to whom one could apply for assistance. Under such conditions, ingenuity and resource were indispensable to success, and there were many men of this century in whom these qualities were pre-eminent.

Karl Ludwig was one of the greatest teachers of this time, combining his ingenuity as an inventor with a wide and deep knowledge of the physical sciences. The most interesting of his inventions is the kymograph, which led to much wider applications of methods of automatic record, becoming the originator of the barometer, electrocardiograph and serving for the investigation of movement of every kind. Another instrument invented by Ludwig was the mercurial blood pump which is an indispensable apparatus for the investigation of the physiology of breathing.

Other instruments invented at this time were the stethoscope, pulse watch, hypodermic syringe and ophthalmoscope—all in common use in medicine to-day.

Next Week:—Sera and Vaccines.

Coming Events

Association of Hospital Matrons.—The next meeting of the Midland Branch of the Association will be held at 3 p.m. on Friday, November 12, at the General Hospital, Birmingham.

The Buchanan Hospital, St. Leonards-on-Sea. The annual prizegiving will be held at 3.15 p.m. on Thursday, November 11. A cordial invitation is extended to any former members of the nursing staff who are able to attend.

Lewisham Hospital, S.E.13.—The Hospital staff is holding a bazaar and dance from 3 p.m. on Saturday, November 6, in aid of the Prisoners of War Fund. The Lady Louis Mountbatten has promised to open the bazaar. There will be side-shows, competitions, stalls, teas (1s.), dancing, 9 p.m. until midnight. Tickets, 2s. 6d.

Royal Institute of Public Health and Hygiene.—In the series of lectures on 'National Health,' Matthew B. Ray, D.S.O., M.D., M.R.C.P., will speak on 'Osteoarthritis,' at 3.30 p.m. on Wednesday, November 10, in the lecture hall of the Institute, 28, Portland Place, W.1. The Rt. Hon. Lord Horder, G.C.V.O., M.D., F.R.C.P., will be in the chair.

St. Mary's Hospital, W.2.—The Autumn meeting of the Past and Present Nurses' League will be held at 3 p.m. on Saturday, November 13, in the nurses' new home. The meeting will be preceded by a service in the hospital chapel at 2.30 p.m.

Correspondence

Maintaining Standards

Through the *Nursing Times* I should like to say to the members of the Rushcliffe Committee : 'Thank you all for what you have done for the nursing profession, and may we look forward to the Private Nurses' Section being dealt with in due course' ; for, if ever there was a misrepresentation of the terms 'sick nurse' or 'State-registered nurse,' it is to be found in this section of our community.

Nursing co-operations exist to-day, as they did before the war, which employ women who are not even educated, much less trained, and their status is that of a State registered nurse; also business concerns exist in nearly every town run by people who, without the slightest elementary knowledge of medicine or nursing, are supposed to be giving a system of service to the public. Should the public be nursed in this fashion.?

And what of the future ? The thousands of partly trained women who will be wanting to be placed after the war, the auxiliaries and V.A.D.s, will drift into one of these co-operations, if we do not prepare now. Many of our splendid State-registered nurses, too, returning from the various battlefronts, will possibly be looking forward to this particular branch of nursing. Is it not fitting and worthy of us at home to see that the status of the private nurse is upheld ?

May I also be permitted to congratulate those nursing co-operations which have, as all of them should have a State-registered nurse at their head and which, under difficult circumstances, have kept their standard of nursing, by only employing State-registered nurses, even though it has been a tremendous effort to do so.

E. N. CLARK, S.R.N., 16308

Queensberry, Victoria Drive, Bognor.

Miss E. M. Lerrigo Retires

Miss E. M. Lerrigo, senior sister tutor at Selly Oak Hospital, Birmingham for over 21 years, retired last month.

Past student nurses will remember with appreciation her untiring work on their behalf, and join in wishing her a 'happy retirement'.

If any former members of the staff would like to subscribe to a farewell gift, please send contributions to Matron by November 20.

Royal College of Nursing News

Membership forms may be obtained from the Secretary, Royal College of Nursing 1a, Henrietta Place, Cavendish Square, W.1., or from local branch secretaries

Education Department

Ward Sisters' Course

It is proposed to hold a week's course for ward sisters from March 6 to 11, 1944, inclusive. The programme will be published at as early a date as possible.

Public Health Section

November Conference

A conference will be held at 2.30 p.m. on Saturday, November 13, in the Cowdray Hall, at the Royal College of Nursing, to discuss the nursing methods of approach to the problems of venereal disease and tuberculosis in the United States of America and Britain.

Dame Janet Aitken, president of the Medical Women's Federation, will be in the chair, and the discussion will be opened by four nurse speakers—two representatives from each country with specialist knowledge of the respective problems.

Tea will be obtainable and the conference will be followed by a bring and buy sale in aid of Mrs. Churchill's Aid to Russia Fund.

Quarterly Meeting

A quarterly meeting will be held at 3 p.m. on Saturday, November 20, at the Nurses' Home, General Hospital, Newcastle-on-Tyne, by kind permission of the matron. Subject for discussion, 'Policy of the Public Health Section with regard to the post-war development of the Public Health Nursing Services'.

Public Health Section within the London Branch.—The District Nurses and Midwives Discussion Group hold their next meeting at 7 p.m. on Thursday, November 11, at the Royal College of Nursing, with Miss Treleaven in the chair. The subject for discussion is 'The Nursing of the Infirm in the Home'. A district nurse is opening the discussion The next meeting of the Health Visitors' and School Nurse's Discussion Group will take place at 6.30 p.m. on Monday, November 15, at the Royal College of Nursing. Subject: 'The Public Health Nurse in Relation to the Social Worker'. Chairman: Mrs. A. A. Woodman.

Public Health Section within the Yorkshire Branch at Leeds.—In co-operation with the University of Leeds, the Section has arranged an industrial nursing one-day study course for State-registered nurses and assistant nurses holding posts in industry. It will be held on Sunday, November 21, in the Algernon Firth Institute of Pathology. **Programme**:—

11 *a.m.* 'The Function of the Industrial Nurse'. Mr. F. Lamb, O.B.E., general manager of Appleyard of Leeds Ltd.

12 *noon.* 'Health Education in the Factory'. Dr. J. Vaughan Jones, Hon. Sec. British Medical Association (Leeds Division). Chairman Dr. Clara Stewart. 1.15 *p.m.* Lunch. A light lunch will be provided at a charge of 1s. per head. 2.30 *p.m.* 'Industrial Eye Injuries'. Mr. Black, M.B., F.R.C.S., hon. ophthalmic surgeon to the General Infirmary at Leeds. Chairman Dr. A. Shirras, M.B., Ch.B.

3.45 *p.m.* Question Hour. Question Master:—Dr. Ingram, M.D., F.R.C.P., physician in charge of the Dermatological Department, General Infirmary at Leeds; Lecturer in Diseases of the Skin, University of Leeds. Brains' Trust:—Mr. Black, M.B., F.R.C.S.; Miss Warren, S.R.N., Midland Area Organizer for the Royal College of Nursing; Sister Pilley, S.R.N., sister in charge of the Medical Department, Messrs. S. Fox & Co., Ltd., Sheffield; Dr. Shirras, Works Medical Officer for Messrs. Geo. Bray & Co., Ltd., and Messrs. Appleyard of Leeds Ltd.; Dr. C. Stewart, Hon. Sec. Leeds Emergency Nursing Committee.

The Institute of Pathology is situated beside the Medical School and the General Infirmary. As seating accommodation is limited, early application should be made. Application forms from Miss Mather, Hon. Secretary, Public Health Section, 10, Wyther Park Place, Leeds, 12, not later than November 15. Fee for course: College members, 4s.; others, 5s. Reservation will be made in strict rotation. Please *do* send your problems for discussion by the Brains' Trust.

Branch Reports

Aberdeen Branch.—A meeting of ward and departmental sisters is to be held at 7.30 p.m. on Wednesday, November 10, at the Royal Infirmary nurses home.

Birmingham & Three Counties Branch.—A general meeting will be held at 6.30 p.m. on Wednesday, November 17, in the College of Nursing Club, 166, Hagley Road, Birmingham. The agenda will include a report on the Branches Standing Committee held October 30. The meeting will be followed by a talk on 'The Mental Health Course of the London University' given by Miss Slack who has just attended the course. Suggestions for the Spring meetings and post-graduate course are required and should be sent to the branch secretary, Miss Whiter, Children's Hospital, Birmingham.

Blackburn and District Branch.—Dr. Briggs will speak on 'Blood Transfusion, Now and in the Future', at 7 p.m., on Wednesday, November 10, in the Town Hall. The Chair will be taken by the Mayoress of Blackburn. All College members, non-members and friends invited.

Blackpool and District Branch.—There will be a general meeting at 7 p.m. on Monday, November 8, at the Sanatorium, Devonshire Road, Blackpool. A whist drive will be held at 6.30 p.m. on Monday, November 15, at the house of Miss Myerscough, 'Rough Lea,' 16, Empress Drive, N.S., Blackpool.

Bristol Branch.—A course of university extension lectures on 'The Social Services' will be held at Bristol University on Wednesdays, from 5.30 p.m. to 7 p.m., beginning on November 10 to December 8. Application to enrol for the course, should be made to the Secretary, Bristol Council of Social Services, 4, Berkeley Square, Bristol, 8.

Burnley and District Branch.—As an innovation four Branch members were asked to talk at the last meeting. The speakers chose the following subjects for their talks:—(1) 'The Administration and Running of an Infectious Diseases Hospital'. (2) 'The Problems of the Young Mother in War-Time'. (3) 'An Interesting Case of a Fractured Skull in a Young Child and the Treatment'. (4) 'The Need of Relaxation from War-Time Problems'. After the talks the agenda for the Branches Standing Committee Meeting at Leeds was discussed. A bring and buy sale in aid of Branch funds will be held from 3.30 p.m. to 6 p.m. on Saturday, November 13, at the Municipal General Hospital. The sale will be opened by Lady James Aitken of Nelson, and the president of the Branch, Miss A. Fearneough, J.P., Deputy Mayor of Burnley, will preside.

Coventry Branch.—A lecture and film will be given on 'The Modern Treatment of Burns by the use of Stannard Irrigation Envelopes', the film to be shown by Messrs. Irrigation Envelopes, Ltd., of 345, Gray's Inn Road, W.C.1, at 6.15 p.m., on Friday, November 12, in the gymnasium of the Coventry and Warwickshire Hospital, Stoney Stanton Road. By courtesy of Miss Burton, matron and superintendent of nurses, the lecture is open to all College members living in the Coventry Branch area.

Derby Branch.—A bring and buy sale will be held from 3 p.m. to 6 p.m., Saturday, November 6, from 3 p.m., at the Derbyshire Royal Infirmary (lecture hall). Refreshments will be obtainable and musical items will be given between 4 p.m. and 5 p.m. The proceeds are to aid Branch funds. Please circulate this event amongst your friends. Members are reminded that annual subscriptions were due on November 1.

Dundee Branch.—Miss Stewart, Area Organizer, took the chair at an open meeting of members held on October 15. A ward and departmental sisters group is being formed in this area, full particulars may be had from the secretary of this group, Miss Pearson, Royal Infirmary, Dundee. Will the members note two dates—November 11 at 7 p.m. and December 7, at 7 p.m. Two lectures are to be held in Maryfield Hospital, Mains Loan.—'The Anaemias', by Dr. G. Rankine, M.B., Ch.B., and 'The Psychopathic Patient'. by Dr. J. B. Macdonald, M.A., M.D., Ch.B., L.R.C.P.

Exeter Branch.—There will be a meeting of the Branch at 2.45 p.m. on Monday, November 8, when Miss Gary o the American Nursing Unit will speak on "Nursing in America". Tea will be provided for American nurses and members.

Glasgow Branch.—A meeting of the Branch will be held at 7.30 p.m. on Tuesday, November 9, at the Royal Infirmary. The lecturer on this occasion will be Colonel Colebrook, M.B.,B.S. (Lond.) and the subject, 'The Control of Infection in Burns and Scalds'. Coloured films will be shown illustrating treatment. Members, student nurses and all interested are cordially invited to attend.

Gloucester and Cheltenham Branch.—A meeting will be held at 2.30 p.m. on Friday, November 12, at the Royal Infirmary, Gloucester. The Branch representative's report of the Branches Standing Committee Meeting held on October 30 will be given. No meeting in December, next meeting at Cheltenham in January. All subscriptions for 1944 are now due.

Manchester and East Lancashire Branch.—Members are invited to attend a lantern lecture on 'The Greek Countryside and its Monuments' by Mr. R. E. Wycherley, Lecturer, in Classics at the University of Manchester, which will be held at St. Mary's Hospital (Clinical Lecture Theatre), Whitworth Street, West Manchester, at 3 p.m., on Saturday, November 13.

Swindon and District Branch.—A meeting will be held at 6.30 p.m. on Friday, November 19, at the Swindon and North Wilts. Victoria Hospital, followed by a lecture on 'Care of the Feet,' by Miss Hicks. A whist drive has been arranged from 7-9 p.m., on Monday, November 8, at the Scouts' Hall, Dowling Street. Tickets 1s. 6d. each may be obtained from Miss Barker, the Victoria Hospital, Swindon.

Worcestershire Branch.—A very enjoyable afternoon was spent at the Royal Infirmary, Worcester, on October 23. Mrs. Winsmore Hooper, vice-president, gave the members a beetle drive and tea. This was arranged by the matron, Miss Perry. There were several prizewinners and the happy afternoon ended all too quickly.

Yorkshire Branch at Leeds.—At 7 p.m., on Wednesday, November 17, in the Clinical Theatre of the Leeds General Infirmary, Dr. E. C. Benn, medical superintendent of Seacroft Hospital, will lecture on 'Recent Advances in the Prevention and Treatment of Infectious Diseases'. Non-members, 1s.

NURSES' APPEAL FOR NURSES

Nation's Fund for Nurses

It is satisfactory to have a response to our appeal for funds to be used especially for coal, but we do need many more please. We need larger totals at the end of each week, too, if we are to give to our Fund the equivalent of the sum we gave them last year. Please do not forget us.

Donations for Week Ending October 30

M. H. Henderson, Secretary, Nurses' Appeal Committee *Nursing Times*, c/o Royal College of Nursing, 1a, Henrietta Place, Cavendish Square, W.1.

British Federation of Social Workers

Two lectures on Educational Reconstruction will be given under the aegis of the British Federation of Social Workers, at 6 p.m. on Wednesday, November 17, and Tuesday, November 23, at Livingstone Hall, Tothill Street, Westminster.

On *Wednesday, November* 17, Sir Richard Livingstone, M.A., president of Corpus Christi College, Oxford, will speak on 'Adult Education: Needs and Possibilities'. Miss J. M. Upcott, president, Society of Women Housing Managers; Chairman of the Council of the British Federation of Social Workers, will be in the Chair.

On *Tuesday November* 23, John Garrett, Esq., M.A., headmaster, Bristol Grammar School, Bristol, will speak on 'Possible Developments in State Education'. Miss J. M. Upcott will be in the chair.

Tickets, 1s. 6d. for each lecture, 3s. for the two. Apply to the Hon. Secretary, British Federation of Social Workers, 5, Victoria Street, S.W.1.

✦ ✦ ✦

Food Education Society.—A lecture on 'Food and the Post-War World' will be given by Professor J. R. Marrack, M.A., M.D., D.S.O., M.C., at 3 p.m. on Monday, November 15, at the London School of Hygiene, Keppel Street, W.C.1.

BRANCHES STANDING COMMITTEE MEETING—(*Contd. from p.* 834)

nurses, health visitors, and dietitians had begun, and a course of special interest to prepare persons interested for post-war relief work in Europe: lectures would include nurses and medical men from various occupied countries. Miss Parsons also reported many scholarships awarded.

Miss Goodall gave a full report of the general work of the College reporting a membership of 33,912, and reminded representatives that subscriptions became due again on November 1. She asked them to do all they could to encourage prompt payment as delay in this matter meant the wastage of time and paper. She hoped that the lectures at Headquarters for Post-War Relief workers would be duplicated in many areas and asked for the co-operation of hospitals in war-time research work concerning hospital conditions which was undertaken on behalf of the Government. She told how inspiring the meeting of 6,000 women representatives of various organizations arranged by the Government had been and how proud she had been of the number of nurses present.

She said that the general work of the Royal College of Nursing at Headquarters grew hourly and told of the new Committee for Northern Ireland which had met twice and was trying to secure for nurses in Ireland similar benefits to those which the Rushcliffe and Taylor Committees had brought to England and Scotland and Wales, as well as opportunities for post certificate education in Northern Ireland: these were almost non-existent. She asked representatives to watch for the publication of the Horder Committee Reports on Education and Training and Recruitment within the next few weeks—not to mention the second report of the Rushcliffe Committee.

Miss Udell, Secretary for the Scottish Board, reported that Scotland was already assured of a record total of new members for the year and said she hoped the Taylor Committee would shortly make its third report. Since the last meeting, the Nurses (Scotland) Act, 1943, had been passed and had entailed considerable work, owing to the intro-

duction of two clauses which were not a part of the English Bill and of which Clause 14 had threatened the standards of nurse education in Scotland. She also discussed the recent report of the Hetherington Committee on Post War Hospitals in Scotland, pointing out that nursing was not mentioned once, and the word 'nurse' only in the statement that the hospitals for the care of the chronic sick would be useful for the training of nurses! The persons who formed the committee did not seem to realize the importance of the nursing problem and seemed to forget the lesson of the report of the Committee dealing with the tuberculosis problem in Scotland which could not be put into effect because the nursing side had not been included, so that there were not the nurses to carry out the proposals. Yet the Committee had found time to consider such details as the interior decoration of the walls, which they felt needed to be improved in some of the institutions.

Reports from the Student Nurses' Association, and Sections followed. The Student Nurses Association had had 2,040 new members in the quarter and had a membership of about 13,000. Mrs. Stocken pointed out that the award of bursaries to the value of £1,000—20 bursaries of £50 each—was a landmark in the progress of the Association. The Central Representative Council had met for the second time in Leeds that week.

The Sister Tutor Section had set up a special committee which had helped to draw up a memorandum on central preliminary training schools and was pressing for the setting up of educational committees in every nurse training school.

The Public Health Section reported many special courses and lectures and Mrs. Hamblin drew attention to the discussion of public health services with American colleagues in this country and the increasing demand for mothercraft lectures from various groups of young women.

For the Private Nurses Section Miss Wenden drew attention to the conference on Nov. 2, and asked all branches to send representatives.

The New Chairman

At the afternoon meeting the first event was the election of Miss D. A. Gibson, matron, Newcastle City General Hospital, as chairman, in succession to Miss C. I. Greig, who had acted so successfully for two years. Miss Gibson thanked the Branches very much for electing her to fill this important position within the College, of which she was a very interested member. She knew how much the opinions of the Committee affected the deliberations of the Council and, therefore, realized the value of its work.

The Committee then went on to discuss the resolutions sent in by the various branches. First of these came the suggestion from the Brighton and Hove Branch through its Ward and Departmental Sisters group that, if a sum of £1,000 was raised, the Council of the College would accept it as evidence of sincere interest, justifying the formation of a Ward and Departmental Sisters' Section within the College: thirty-eight branches had reported in favour of this and ten more spoke in favour of it from the floor. Miss Christie said that 13 such groups already existed, and that the sisters in the Brighton and Hove Branch were already at work making the necessary funds. Other branches promised support and the resolution was sent up to the Council.

Next the representatives discussed the Edinburgh resolution suggesting that, owing to the shortage of trained staff in non-training schools and some of the hospitals in the Emergency Hospital service, all training schools should adopt the Statutory period of three years' training, and student nurses on becoming State-registered should be required to serve for one year in civilian hospitals where such trained staff were urgently needed. Opinion on this matter was pretty evenly divided, but there was a slight majority in favour of it (26 to 21). In discussion, it appeared that the position in Scotland was worse than that in England: here there were only twenty-eight general training schools and these had long waiting lists. If all hospitals with a four year training period reduced this to three years, they would make vacancies for girls who wanted to take up nursing, but could not now start their professional careers. In England many hospitals already gave a three year training, and some hospitals were short of candidates. All hospitals would need, the representatives agreed, a proportion of nurses in the fourth year for efficient staffing of the wards. Many suggested that the matter should await the report of the Horder Committee on the Education and Training of the nurse. The representatives decided to send the resolution to Council.

Concerning Change of Policy

A second resolution from the Edinburgh Branch that the Council should not take action on any matter which involved a change of policy without a majority vote of two-thirds of the total number of Branches received almost unanimous support. A resolution from the London Branch concerning affiliations was referred back to the branch for clarification, and a second dealing with the effect of alcoholic indulgence on the spread of venereal disease and illegitimacy was freely discussed and well supported. Representatives debated the difference of opinion on this matter, but many expressed the view that the 'no treating order' in the last war had produced a definite improvement, although it concerned the Services only. On every side representatives expressed the need for alternative refreshment, including soft drinks, and recreation, and readily available to members of the Services and industrial workers, especially the transferred workers; also for more education of young persons on matters of sex, mothercraft and fathercraft. The representatives agreed to collect reliable information on the subject throughout the branches and to explore the possibility of group action with other women's organizations.

CLASSIFIED ADVERTISEMENTS CONTINUED FROM PAGE VII

VITAMIN THERAPY IN PREGNANCY

Widespread Causes of Sub-Nutrition

Poverty is by no means the only cause of nutritional deficiency; the latter exists in all classes of society. Too great dependence on over-refined foods may result in sub-optimal intakes even with diets freely chosen under favourable economic conditions. Overwork, worry, chronic infections and debilitating states generally may all play a part in decreasing the optimal intake of the essential food elements.

Investigations of the effects of different levels of vitamin intake, and other long-term experiments, now greatly facilitated by modern methods of assay, have enabled a fairly accurate opinion to be formed as to the necessary intake of essential vitamins and minerals.

A Single Supplement for Multiple Deficiencies

Pregnavite Tablets contain vitamins A, B_1, C and D, together with calcium, phosphorus and available iron, in correct amounts and proportions to meet the requirements of pregnancy and in the most convenient and economical form.

Further particulars concerning Pregnavite on request to Vitamins Ltd. (Dept. NTPRA), 23, Upper Mall, London, W.6.

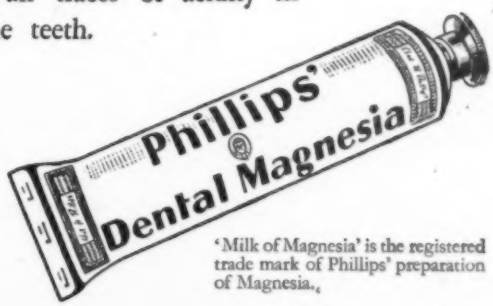
MORNING SICKNESS *and* DENTAL DECAY

In the study of the etiology of dental decay, it has been proved that acidity in the mouth has a pathogenic action on the teeth. During pregnancy, therefore, and especially in cases where the vomiting of morning sickness is persistent, the patient should be advised to use only Phillips' Dental Magnesia. This dentifrice contains a high percentage of 'Milk of Magnesia', and because of its antacid properties it instantly neutralises all traces of acidity in the mouth and thus preserves the teeth.

Get Phillips' Dental Magnesia for your patient to-day. 1/1d. and 1/10½d. per tube.
Of all Chemists and Stores.



'Milk of Magnesia' is the registered trade mark of Phillips' preparation of Magnesia.

Nurses Should Read "THE CRISIS IN A WOMAN'S LIFE"

—an informative book dealing with the symptoms of the Menopause. It throws light upon a subject hitherto wrapt in mystery and shrouded with superstition. It is so written as to allay the fears and dispel the unnecessary anxieties of those approaching or passing through the Menopausal years.

SYMPTOMS OF THE MENOPAUSE

Nurses know that frequently the first symptom experienced by women approaching the Menopause is that of HOT FLUSHES OF THE FACE AND NECK, but there are many others, often more difficult to distinguish because of their similarity to ordinary health disturbances. Some of the more usual of these symptoms are "NERVES," GIDDINESS, PALPITATION, HEADACHES, EAR NOISES, INSOMNIA, "PINS AND NEEDLES," SUDDEN OBESITY, ITCHING, etc.

MENOPAX

a compound œstrogenic sedative for symptoms of the Menopause is an up-to-date medicine for such conditions and is prescribed by doctors.

Prices 2/10, 5/7½, and 11/3, from chemists.

FREE TO NURSES Readers of the **'Nursing Times'** are cordially invited to send for FREE PROFESSIONAL SAMPLE OF MENOPAX, and 3d. in stamps for a copy of the Book, "The Crisis in a Woman's Life." (8th edn.)

The Delicious Moment

Children find this Vitamin Food Irresistible

"TIME for Vimaltol" is a momentous occasion which Nurse is never allowed to overlook, once the children have experienced the delightfully sweet orange flavour of this concentrated vitamin food. Whether it is taken direct from the spoon or used as a spread on bread 'Vimaltol' is irresistibly delicious, and quite as nice as the nicest jam.

Moreover, 'Vimaltol' has important claims to a regular place in every child's dietary. It possesses definite advantages for increasing strength and weight, forming firm bones and teeth, and fortifying resistance against coughs, colds, and other winter ailments.

The vitamins are supplied from specially prepared malt extract and yeast which is one of the richest natural sources of vitamin B, together with Halibut Liver Oil fortified with additional vitamins.

The regular use of 'Vimaltol' will provide an additional safeguard against winter ills, and assist in raising the general resistance against infection.
